

### Exercitiul 1:

Se considera baza de date Training sursa si baza de date Training\_SSIS destinatie.

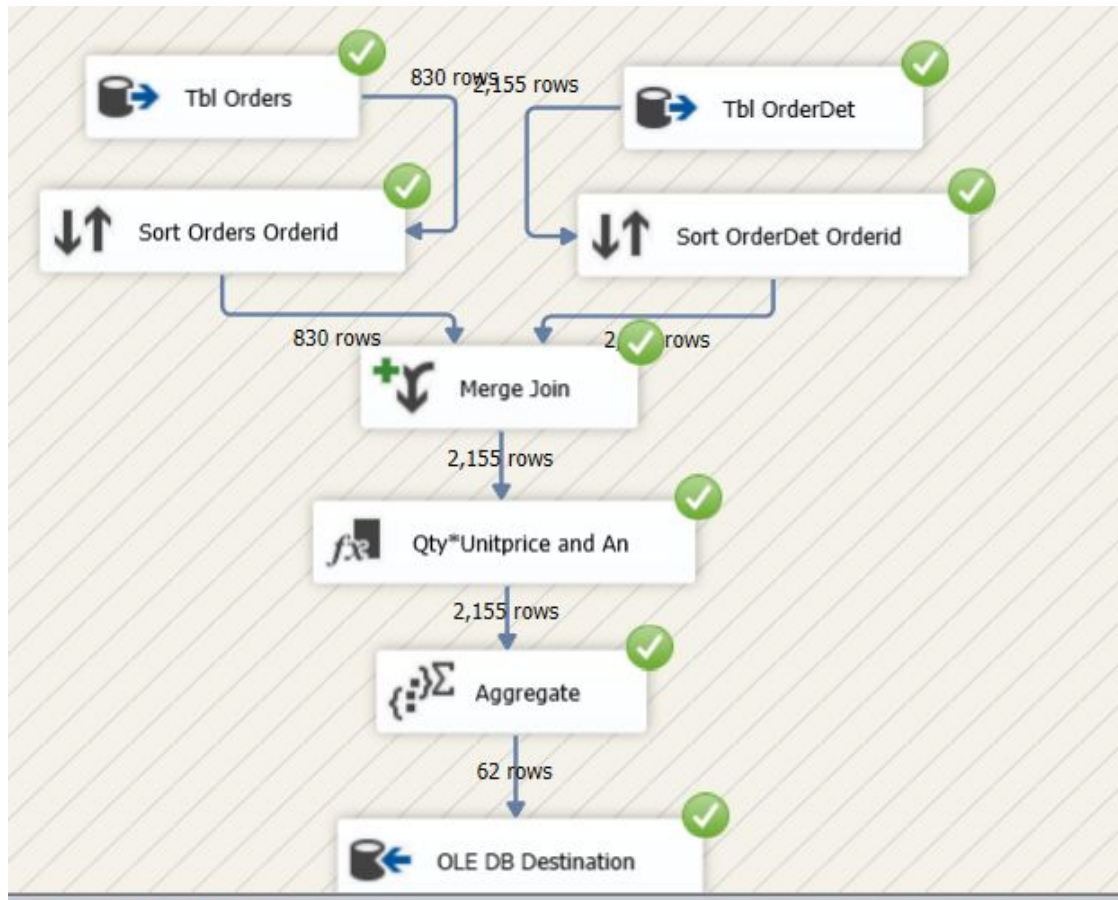

Departamentul de reporting solicita departamentului de DWH un raport conform statementului de mai jos:

```
Select
    o.shipcountry as [Tara Livrare],
    year(o.orderdate) as [An plasare comanda],
    sum(od.qty*od.unitprice) as Incasare
from Training.sales.Orders as o
inner join Training.sales.OrderDetails as od
on o.orderid=od.orderid
group by
    o.shipcountry,
    year(o.orderdate)
```

Departamentul de reporting doreste ca raportul sa fie stocat intr-o tabela din baza de date Training\_SSIS, conform:

```
Create table Traning_SSIS.dbo.Raport
([Tara livrare] nvarchar(50),
[An plasare comanda] int,
Incasare decimal(18,4)
)
```

Sa se creeze un pachet SSIS care sa extraga datele din tabelele sursa Sales.Orders si Sales.OrderDetails si sa incarce datele in tabela destinatie Raport.
